Objective

Computer Science Engineering student with relevant hands-on experience in backend development, problem solving, and building real-world applications using Java, Python, APIs, and databases. Focused on understanding efficient system design and eager to grow in a professional engineering environment while delivering reliable and high-quality solutions.

Skills

Languages: C, Java, Python, TypeScript.

Web / Frontend: HTML, JavaScript, React, Tailwind CSS.

DataBases: MySQL.

FrameWorks / Tools: JDBC (Java Connector), Git / GitHub, Next.js (App Router), REST APIs.

Concepts: OOP, OS, Data Structures & Algorithms, Backend development.

Education

Vasavi College of Engineering

B.E. in Computer Science 2024 – 2028

Relevant Coursework: Object Oriented Programming, Databases, Discrete Maths, Data Structures and Algorithms, Operating Systems, Computer Networks, Machine Learning.

Projects

Movie Ticket Booking System

- Built backend REST APIs to manage movies, showtimes, seat layouts and bookings; supported search, view-availability, book and cancel operations.
- Built transactional seat-booking with seat-locking and optimized database design.
- Deepened backend skills — API design, JDBC/DB integration, transaction management and collaborative development with a frontend teammate. **MediCamp.ai**
- Built a multilingual healthcare web application supporting real-time consultations with Speech-to-Text and AI-driven translation to bridge language gaps.
- Integrated Google Gemini 1.5 Pro with LangChain to automate symptom extraction and prescription safety checks.

- Gained hands-on experience in building high-impact AI solutions, strengthening skills in AI integration, scalable backend design, and developing production-ready applications.

AI Notes Summarizer

- Build a full-stack web application using the Next.js App Router and TypeScript to transform long-form text into concise summaries.
- Engineered a secure server-side API route `api/summarize` integrating the Gemini 2.5 Flash model while protecting backend API keys from client exposure.
- Developed a responsive, state-driven user interface with Tailwind CSS featuring a dynamic client-side text editor and a persistent recent summary history panel.
- Deepened full-stack skills — modern React 19 patterns, server-side AI integration, environment variable security, and component lifecycle management.
